DETAILED ACTION

Claim Objections

1. Applicant is advised that should claims 2, 3, 7 and 14 are found allowable, claims 4, 5, 10 and 17, respectively, will be objected to under 37 CFR 1.75 as being a substantial duplicate thereof. When two claims in an application are duplicates or else are so close in content that they both cover the same thing, despite a slight difference in wording, it is proper after allowing one claim to object to the other as being a substantial duplicate of the allowed claim. See MPEP § 706.03(k).

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-19 and 21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1, 4, 6, 10, 13 and 17, it is unclear of the degree of the refractive index of the coating layer relative to other refractive indices. Since the degree of the refractive index of the coating layer relative to other refractive indices is an important limitation of the invention, the lack of this information renders the claims indefinite. Claims 2, 3, 5, 7-9, 11, 12, 14-16, 18 and 19 are rejected based upon the rejected base claim.

Regarding claim 21, the phrase “substantially similar” renders the claim indefinite. Since claim 20 states that the refractive indices of the adhesive layer and the second lens are different, the above mentioned phrase does not clearly define the boundary for the two refractive index regions.

Allowable Subject Matter

3. Claims 20, 23 and 24 allowed. The following is a statement of reasons for the indication of allowable subject matter. Regarding claim 20, the prior art fails to disclose that the adhesive has a refractive index closer to the second refractive index than the first refractive index, and the coating layer has refractive index between the first refractive index and the refractive index of the adhesive.

Conclusion
